

Support Listing Coin

What is an SLC?

Support Listing Coin (SLC) is a kind of secondary token offer that takes place on a certain cryptocurrency exchange. It includes a new security feature that makes the investments safe.

What are the perspectives of SLC?

The trust level reduces with the crypto community growth. Investors want to have certain guarantees and specific security measures. And SLC has them.

Types of SLC.

1. RocketIco:

- 110%-107% price walls;
- 20% of btc from ICO will go to Coin InvestBox Plan (3% daily).

2. Normal ICO walls:

- 50%-70% buy wall (10% fee + 0.25 btc prepay);
- 80%-90% buy wall (9% fee);
- 100% buy wall (8% fee).

3. Top secret:

- 101%-103% price walls;
- 15-20% of btc from ICO will go to Coin InvestBox Plan (2% daily).

4. Micro

- 0%-10% buy wall (12% fee + 0.5 btc prepay);
- 20%-30% buy wall (12% fee + 0.25 btc prepay);
- 40% buy wall (11% fee + 0.2 btc prepay).

5. Top secret+

- 104%-106% price walls;
- 20-25% of btc from ICO will go to Coin InvestBox Plan (2% daily).

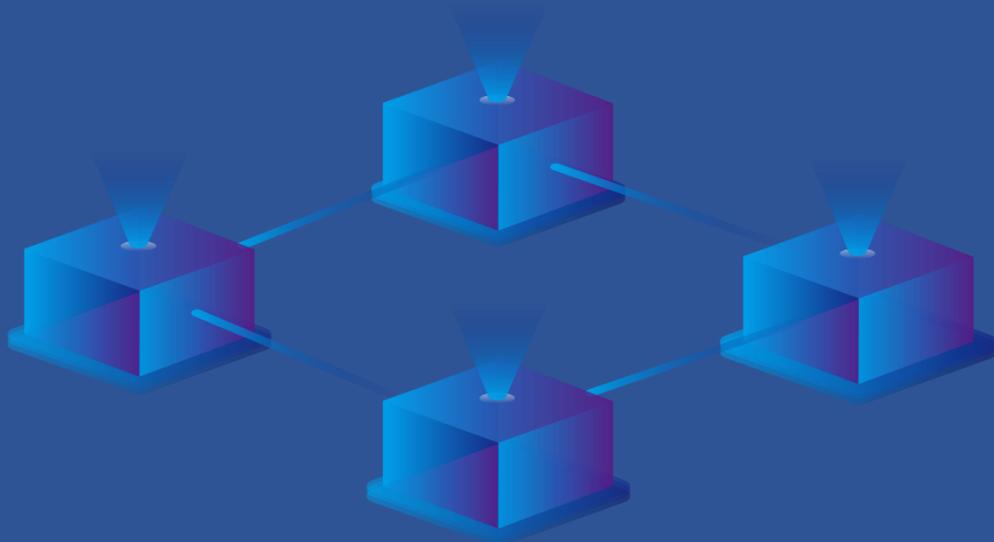

Investment Securities.

Unlike ICO and IEO, SLC does not require investing any funds in smart contracts. Users who want to take part in SLC can enroll via cryptocurrency account. The procedure is simple and clear: users just need to deposit their funds to their exchange accounts and buy tokens in the prescribed time.

The main feature of SLC is that all funds collected during the crowdsale from the investors are immediately placed in purchase orders on the hosting cryptocurrency at the sale price. This way the investors bear no risk of losing their funds.

All projects that wish to launch SLC are thoroughly inspected by the hosting cryptocurrency. The exchangers are interested in launching new projects only with reliable developers because their reputation is at stake.

Usually, SLC is launched by skilled project managers that have good track record and a certain base of followers and investors that form a stable community.

How does Support Listing Coin (SLC) work and what is the difference

between SLC and IEO?

2017 boomed with numerous ICOs and many people lost their money. IEO came after and provided a better investment security and overall reliability. However, it still was a risky tool. This led to a Support Listing Coin (SLC) emergence that becomes popular every day.

What are the differences between ICO, IEO & SLC?

DIFFERENCES	ICO	IEO	SLC
 FUNDRAISING GROUND	Determined by the token issuer	Determined by the exchange	Determined by the exchange
 OFFER INITIATOR	Developers themselves	The hosting cryptoexchange	The hosting cryptoexchange
 SMART CONTRACT ADMINISTRATOR	Developers themselves	The hosting cryptoexchange	Smart contract is not required. The funds are introduced through the user's account on a cryptocurrency exchange
 SPECIAL REQUIREMENTS FOR AML/KYC FOR THE ISSUER	Depend on a project and vary from case to case	AML/KYC is conducted and administrated by the hosting cryptoexchange	AML/KYC is conducted and administrated by the hosting cryptoexchange
 BUDGETING AND MARKETING REQUIREMENTS	Project developers borne all costs. Significant budgets are needed	The hosting cryptoexchange is involved in marketing by promoting the offer to its users	The hosting cryptoexchange is involved in marketing by promoting the offer to its users
 PRELIMINARY BACKGROUND CHECK AND SCREENING	No screening or background checks are required	The hosting exchange conducts screening and background checks before allowing a fundraiser	The hosting exchange conducts screening and background checks before allowing a fundraiser
 AUTOMATED PURCHASE ORDERS SET TO SUPPORT THE LISTING	Listing of sold tokens is a separate task that the project developers have to face	The hosting cryptoexchange takes care of the tokens' listing	The hosting cryptoexchange takes care of the tokens' listing. Besides, it sets out the purchase orders for 100% of the sold tokens at the offer price

SLC Coin.

The SLC coin runs on the Ethereum ERC 20 blockchain and has a strict token limit. You can't mine SLC like a proof of work cryptocurrency. You can buy SLC from Coinsbit cryptocurrency exchange using bank or wire transfer, credit or debit card, or any other exchanges offering cryptocurrency.

Please note that all users need to create a new wallet for SLC tokens, as the transition to the network with a lower fee is planned in 9 months. Due to this, the Binance Smart Chain (BSC) network was chosen.

Benefits of the SLC token.

The SLC token has a burnable on for users function. You will be able to burn your tokens yourself, which will add value and growth to the token. Twice times a month we place orders to buy 0.1btc in one pair of our coins.

Bonuses of the following type will be available for burning:

- priority access to listings;
- exclusive access to some listings
- titles for the SLC community
- exclusive stakes for BTC and USDT and our tokens
- increase in received airdrops
- additional bonuses and access to insurance functions, rates on BTC prices
- participation in the lottery

And also for burning tokens, you will receive "votes" to vote on new services, listings and other bonuses from the SLC project. Thus, the token will be community-

friendly - this means that global decisions on the token will be made by voting among its holders (the more the share, the more votes the holder has).

Part of the funds from the token income will be distributed:

- for farming, to understand farming, tools will be created explaining that farming is not buying a token and risks, but pledging funds for a certain period of time.

- part of the funds will go to support the SLC token (support will rise with each new purchase).

- part of the funds from other listings of the SLC project after the developers tokens are thawed will go to the glass to support the SLC token.

- 2 times a month, buy orders will be placed in one pair with the SLC token.

Token Sale.

- Total supply of tokens: 1,000,000,000 SLC
- Trading: 20,000,000 SLC
- Development Team: 280,000,000 SLC
- Staking Pool: 700,000,000 SLC
- Starting Price: 0.00000101 BTC

FAQ.

What is SLC?

- Support Listing Coin (SLC) is a kind of secondary token offer that takes place on a certain cryptocurrency exchange. It includes a new security feature that makes the investments safe.

How does SLC work?

- The SLC team conduct the company's audit before listing. The SLC is a finished product so there is no need in funds raising for development. Opposite to this, IEO doesn't guarantee that the product will be re-leased and not scrapped.

What are the advantages of SLC?

- The main SLC feature that IEO doesn't have is the investment safety. All funds from tokens sale go to pro-ject support. They appear in a purchase order at the tokens selling price.
